

AQUATIC CENTER UPDATE

April 22, 2025

We are happy to report that repairs to the locker rooms will begin within a few days and will be completed in approximately 8 weeks. This process will include installing ADA doors from the locker rooms to the pool area. The doors will enable the dehumidifier to work at peak efficiency.

The BOD Aquatic Center Repair Liaison Committee will meet weekly with Charter Construction and Forensic on site, so we will always be apprised of the progress of the repairs. The construction site supervisor has established an office in the small nook area in the pool room. He will be on site all day every day during the construction project.

The dehumidifier is ready to go. We will just need to test the air flow balance once the doors are installed. When all the construction repairs are completed, it might take several weeks for the pool itself to get up and running. We are looking at a pool that has been unused for a long period of time and there may possibly be unknown issues.

When everything is completed, look for a grand opening and celebration announcement.
